ELSEVIER

Comput. Methods Appl. Mech. Engrg. 156 (1998) 391–394

Computer methods in applied mechanics and engineering

Subject Index of Volume 156

Collocation method
Conforming spectral approximations for non-conforming domain decompositions, A. Karageorghis and S. Sivaloganathan 299–308

Composite materials
Scattering of antiplane impact waves by cracks in a layered elastic solid, S.W. Liu, J.C. Sung and M.S. Lin 335–349

Control theory
Optimal damper positioning in beams for minimum dynamic compliance, I. Takewaki 363–373

Dynamics
A study of the stability of subcycling algorithms in structural dynamics, W.J.T. Daniel 1– 13
Numerical aspects for free vibration of thick plates. Part I: Formulation and verification, C.W. Lim, K.M. Liew and S. Kitipornchai 15– 29
Numerical aspects for free vibration of thick plates. Part II: Numerical efficiency and vibration frequencies, C.W. Lim, S. Kitipornchai and K.M. Liew 31– 44
An exact symplectic geometry solution for the static and dynamic analysis of Reissner plates, G. Zou 171–178
Implementation and adaptivity of a space–time finite element method for structural dynamics, X.D. Li and N.-E. Wiberg 211–229

Elasticity
An exact symplectic geometry solution for the static and dynamic analysis of Reissner plates, G. Zou 171–178
Variationally derived 3-field finite element formulations for quasistatic poroelastic analysis of hydrated biological tissues, M.E. Levenston, E.H. Frank and A.J. Grodzinsky 231–246
Scattering of antiplane impact waves by cracks in a layered elastic solid, S.W. Liu, J.C. Sung and M.S. Lin 335–349
A posteriori error estimation and adaptivity for linear elasticity using the reciprocal theorem, F. Cirak and E. Ramm 351–362

Finite difference methods
Two-dimensional Lagrangian method for elastic–plastic flow, W.H. Lee 149–169
Analysis of dynamic response of prey–predator system with nonliner diffusion–reaction equations by using superposition, Y. Ding and M. Kawahara 375–388

Finite element and matrix methods
A study of the stability of subcycling algorithms in structural dynamics, W.J.T. Daniel 1– 13
Numerical aspects for free vibration of thick plates. Part I: Formulation and verification, C.W. Lim, K.M. Liew and S. Kitipornchai 15– 29

Numerical aspects for free vibration of thick plates. Part II: Numerical efficiency and vibration frequencies, C.W. Lim, S. Kitipornchai and K.M. Liew 31– 44
Structural instability analyses based on generalised path-following, A. Eriksson 45– 74
Co-rotational flat facet triangular elements for shell instability analyses, C. Pacoste 75–110
Comparison of some finite element methods for solving the diffusion–convection–reaction equation, R. Codina 185–210
Implementation and adaptivity of a space–time finite element method for structural dynamics, X.D. Li and N.-E. Wiberg 211–229
Variationally derived 3-field finite element formulations for quasistatic poroelastic analysis of hydrated biological tissues, M.E. Levenston, E.H. Frank and A.J. Grodzinsky 231–246
A consistent finite element formulation for linear buckling analysis of spatial beams, K.M. Hsiao, R.T. Yang and W.Y. Lin 259–276
Conforming spectral approximations for non-conforming domain decompositions, A. Karageorghis and S. Sivaloganathan 299–308
A posteriori error estimation and adaptivity for linear elasticity using the reciprocal theorem, F. Cirak and E. Ramm 351–362
Analysis of dynamic response of prey–predator system with nonliner diffusion–reaction equations by using superposition, Y. Ding and M. Kawahara 375–388

Fluid mechanics
Application of an automatic differentiation method to a 2D Navier–Stokes CFD code, H. Hu 179–183
Comparison of some finite element methods for solving the diffusion–convection–reaction equation, R. Codina 185–210
Analysis of dynamic response of prey–predator system with nonliner diffusion–reaction equations by using superposition, Y. Ding and M. Kawahara 375–388

Fracture mechanics
Scattering of antiplane impact waves by cracks in a layered elastic solid, S.W. Liu, J.C. Sung and M.S. Lin 335–349

Miscellaneous topics
Variationally derived 3-field finite element formulations for quasistatic poroelastic analysis of hydrated biological tissues, M.E. Levenston, E.H. Frank and A.J. Grodzinsky 231–246

Neural networks
Structural optimization using evolution strategies and neural networks, M. Papadrakakis, N.D. Lagaros and Y. Tsompanakis 309–333

Nonlinear mechanics
Structural instability analyses based on generalised path-following, A. Eriksson 45– 74
Co-rotational flat facet triangular elements for shell instability analyses, C. Pacoste 75–110
Approximation of shell geometry for nonlinear analysis, P. Destuynder and M. Salaün 111–148
Two-dimensional Lagrangian method for elastic–plastic flow, W.H. Lee 149–169
Application of an automatic differentiation method to a 2D Navier–Stokes CFD code, H. Hu 179–183
Variationally derived 3-field finite element formulations for quasistatic poroelastic analysis of hydrated biological tissues, M.E. Levenston, E.H. Frank and A.J. Grodzinsky 231–246
The finite deformation theory for beam, plate and shell structures. Part II. The kinematic model and the Green–Lagrangian strains, M. Li 247–257
Nonlinear analysis based on homogeneous incremental systems, M. Kowalczyk 277–297

Numerical solution procedures
A study of the stability of subcycling algorithms in structural dynamics, W.J.T. Daniel 1– 13
Structural instability analyses based on generalised path-following, A. Eriksson 45– 74
Application of an automatic differentiation method to a 2D Navier–Stokes CFD code, H. Hu 179–183
Implementation and adaptivity of a space–time finite element method for structural dynamics, X.D. Li and N.-E. Wiberg 211–229
Nonlinear analysis based on homogeneous incremental systems, M. Kowalczyk 277–297
A posteriori error estimation and adaptivity for linear elasticity using the reciprocal theorem, F. Cirak and E. Ramm 351–362
Optimal damper positioning in beams for minimum dynamic compliance, I. Takewaki 363–373
Analysis of dynamic response of prey–predator system with nonliner diffusion–reaction equations by using superposition, Y. Ding and M. Kawahara 375–388

Optimization
Structural optimization using evolution strategies and neural networks, M. Papadrakakis, N.D. Lagaros and Y. Tsompanakis 309–333
Optimal damper positioning in beams for minimum dynamic compliance, I. Takewaki 363–373

Optimization and design of structures
Structural optimization using evolution strategies and neural networks, M. Papadrakakis, N.D. Lagaros and Y. Tsompanakis 309–333
Optimal damper positioning in beams for minimum dynamic compliance, I. Takewaki 363–373

Plasticity
Two-dimensional Lagrangian method for elastic–plastic flow, W.H. Lee 149–169

Shells and plates
Numerical aspects for free vibration of thick plates. Part I: Formulation and verification, C.W. Lim, K.M. Liew and S. Kitipornchai 15– 29
Numerical aspects for free vibration of thick plates. Part II: Numerical efficiency and vibration frequencies, C.W. Lim, S. Kitipornchai and K.M. Liew 31– 44
Co-rotational flat facet triangular elements for shell instability analyses, C. Pacoste 75–110
Approximation of shell geometry for nonlinear analysis, P. Destuynder and M. Salaün 111–148
An exact symplectic geometry solution for the static and dynamic analysis of Reissner plates, G. Zou 171–178
The finite deformation theory for beam, plate and shell structures. Part II. The kinematic model and the Green–Lagrangian strains, M. Li 247–257

Solutions of ordinary and partial differential equations
Comparison of some finite element methods for solving the diffusion–convection–reaction equation, R. Codina 185–210
A posteriori error estimation and adaptivity for linear elasticity using the reciprocal theorem, F. Cirak and E. Ramm 351–362

Stability in structural mechanics
Structural instability analyses based on generalised path-following, A. Eriksson 45– 74
Co-rotational flat facet triangular elements for shell instability analyses, C. Pacoste 75–110
A consistent finite element formulation for linear buckling analysis of spatial beams, K.M. Hsiao, R.T. Yang and W.Y. Lin 259–276

Structural mechanics
Numerical aspects for free vibration of thick plates. Part I: Formulation and verification, C.W. Lim, K.M. Liew and S. Kitipornchai 15– 29
Numerical aspects for free vibration of thick plates. Part II: Numerical efficiency and vibration frequencies, C.W. Lim, S. Kitipornchai and K.M. Liew 31– 44
Structural instability analyses based on generalised path-following, A. Eriksson 45– 74
Co-rotational flat facet triangular elements for shell instability analyses, C. Pacoste 75–110
An exact symplectic geometry solution for the static and dynamic analysis of Reissner plates, G. Zou 171–178
Implementation and adaptivity of a space–time finite element method for structural dynamics, X.D. Li and N.-E. Wiberg 211–229
The finite deformation theory for beam, plate and shell structures. Part II. The kinematic model and the Green–Lagrangian strains, M. Li 247–257
Nonlinear analysis based on homogeneous incremental systems, M. Kowalczyk 277–297
A posteriori error estimation and adaptivity for linear elasticity using the reciprocal theorem, F. Cirak and E. Ramm 351–362
Optimal damper positioning in beams for minimum dynamic compliance, I. Takewaki 363–373

Systems of linear and nonlinear simultaneous equations
Nonlinear analysis based on homogeneous incremental systems, M. Kowalczyk 277–297

Transport phenomena
Comparison of some finite element methods for solving the diffusion–convection–reaction equation, R. Codina 185–210

Viscoelastic and viscoplastic media
Optimal damper positioning in beams for minimum dynamic compliance, I. Takewaki 363–373

Viscous flow
Application of an automatic differentiation method to a 2D Navier–Stokes CFD code, H. Hu 179–183
Conforming spectral approximations for non-conforming domain decompositions, A. Karageorghis and S. Sivaloganathan 299–308

Wave motion
Scattering of antiplane impact waves by cracks in a layered elastic solid, S.W. Liu, J.C. Sung and M.S. Lin 335–349
